

***Twisted coolant bars for aerospace drills***  
***High speed steel twisted or straight holes bars for special aerospace cutter***

Drilling and countersinking of all rivet holes can be done in one operation. Drill diameters have been designed to meet requirements of various riveting specifications.

FORECREU proposes multiple geometries with reduced center hole distance and IDs up to 50% of standard geometry.

The particularly small size of the holes and the very narrow center distance are designed for multi-step tools, aerospace drills known as Spacematic™ or Drivematic™.

It allows construction of the most complex tools in one piece.

Available grades include M35 (HSS-Co 5%), PM30 (PM-HSS Co 8.5%).
